DETAILED ACTION

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-14, 23-25, 41-45, drawn to an exposure apparatus that exposes a substrate, classified in class 355, subclass 68.
 - II. Claims 15-22, drawn to transport system, classified in class 414, subclass 935.
 - III. Claims 26-33, drawn to a holder container for substrates, classified in class 355, subclass 72.
 - IV. Claims 34-40, drawn to a device-manufacturing unit with gas control, classified in class 355, subclass 30.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I, II, III, and IV, are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the combination does not require that the holder transport system transport a

Art Unit: 2851

holder out of a clean space as recited in invention II. The combination as claimed does not require the particulars of the subcombination as claimed because the combination does not require a plurality of shelves that can hold a plurality of substrates as recited in invention III. The combination does not require that the container contain the holder in a sealed manner while isolating the inside of the container and the gas control as recited in invention IV. The subcombination II has separate utility such as transporting a holder for anything else but a substrate. The subcombination III has separate utility such as a holder for a substrate other than a photosensitive substrate. The subcombination IV has separate utility such as a device-manufacturing unit which does not require an exposure apparatus exposing a substrate through a mask.

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

5. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the

Art Unit: 2851

application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
